ニワトリ卵白からオボアルブミンの精製

Ver. 20171005
Written by S. Natsuka

目的と方法の概要

ニワトリ・オボアルブミンはハイマンノース型とハイブリッド型を主に含む糖タンパク質であり、それら糖鎖を調製するために用いられる。卵白からグロブリン画分を塩析で除いた後、さらに塩濃度を上げて結晶化させ精製品を得る。

この方法を使った時に引用すべき論文

The hydrogen ion dissociation curve of the crystalline albumin of the hen's egg.

プロトコル

~700 mL egg white from 20 hen eggs

↓ add equal volume of Na₂SO₄ solution (400 g Na₂SO₄ + 1 L DDW)

↓ mix by stirring

↓ stand still for 1 h

↓ centrifuge 10,000 rpm, 10 min, room temp.

sup.

↓ adjust pH to 4.7 by 0.1 M H₂SO₄

↓ add anhydrous Na₂SO₄ at 35°C until saturation

↓ decant to remove unsolved Na₂SO₄

↓ stand still for o/n

↓ centrifuge 10,000 rpm, 10 min, room temp.

ppt.

↓ dissolve in the same volume of DDW with the initial egg white

↓ re-salting out by anhydrous Na₂SO₄, x twice

ppt.

↓ dissolved in as little DDW as possible

↓ dialyze against DDW, x 7 times

↓ lyophilize

ovalbumin (~30 g)
